safe &
secure

patient
services

valuable to
patients living
hectic lives

EMIS Access provides essential services for practices and patients day and night. More than one in 10 practices across the UK are now benefiting from the service.

Administration services include:

- **Appointments** – patients can book/ cancel appointments 24/7 and the EMIS appointments system will be updated instantly, with no manual intervention by practice staff
- **Request repeat prescriptions*** – patients can request repeat prescriptions online – the surgery verifies it and replies via EMIS Access. The patient only needs to make one trip to the surgery to pick up their prescription
- **Secure messaging*** – patients can message non-urgent enquiries to the practice and vice versa, e.g. opening times or next flu vaccination
- **Update personal details*** – patients can update their basic information such as change of address, surname or telephone number. The surgery will be notified of any changes to be authorised
- **Pre-registration*** – new patients can fill in pre-registration information online, which is automatically populated into the clinical system
- **Patient Record Access** – allows patients to securely view a summary of their medical history from any PC with a live internet connection – whether in the UK or abroad.

Practice benefits

- **Save time** – administration overheads can be dramatically reduced, freeing practice staff to offer other patient services
- **Maximise QOF points** – staff can use the time they have saved to focus on activities that contribute to QOF points
- **DNAs reduced** – practices with EMIS Access installed have noticed a significant reduction in DNA rates.

You're in charge

EMIS Access is a module based system; this allows each practice to install all or part of the service – you have complete control of the modules you release.

Security

EMIS Access uses high level security authenticity - this means patient data is held securely within EMIS Access. To access any of the facilities or medical records, patients must enter their own unique user ID.

Digital TV

EMIS Access is also available through Digital TV – enabling patients to request repeat prescriptions and book appointments. Like internet booking, this updates the EMIS clinical system in real time.

Further information

EMIS access is quick and easy to set up. Visit the EMIS Common Room to download the easy to follow configuration instructions:

- TH349 PCS Configuring EMIS Access
- TH142 LV Configuring EMIS Access

* Repeat prescription ordering, secure messaging, pre-registration and the option to update contact details are currently only available to EMIS LV practices.
